Poverty

Child Poverty

The proportion of children (under 16) who are living in families whose reported income is less than 60 per cent of UK median income

Source: Department for Work and Pensions

Fuel Poverty

The new (2021) fuel poverty metric Low Income Low Energy Efficiency (LILEE) considers a household to be fuel poor if:

- it is living in a property with an energy efficiency rating of band D, E, F or G; and
- its disposable income (income after housing costs (AHC) and energy needs) would be below the poverty line.

Source: Department for Business, Energy & Industrial Strategy

Pension Credit

Pension Credit is an income-related benefit made up of 2 parts - Guarantee Credit and Savings Credit.

Source: Department for Work and Pensions (DWP)

Indices of Multiple Deprivation

The IMD measures and rates a number of different domains affecting quality of life including income, employment, education and skills, health and disability, crime, barriers to services and quality of living environments.

York Profile

Health and Wellbeing

The **Health Index** provides a single value for health, and can be broken down to show what aspect of health is contributing to changes in Index scores.

The Index is split into three domains:

- Healthy People focusing on health outcomes
- Healthy Lives focusing on health-related behaviours and personal circumstances
- Healthy Places focusing on wider determinants of health, environmental factors

The Health Index has been scaled to a base of 100 for England, with base year of 2015. Values higher than 100 indicate better health than England 2015, and values below 100 indicate worse health. The scale is such for indicators at LTLA level that a score of 110 represents a score one standard deviation higher than England's 2015 score for that same indicator, 120 represents a value two standard deviations higher, and so on.

York Profile

The slope index of inequality shows how much life expectancy at birth varies with deprivation. A higher figure shows a greater disparity between the more deprived and the less deprived areas.

York Profile

Hospital Admissions - Children & Young People

Hospital admissions - Residents

Emergency hospital admissions

The Standardised Admission Ratio (SAR) is a summary estimate of admission rates relative to the national pattern of admissions and takes into account differences in a population's age, sex and socioeconomic deprivation.

Legend: National (grey), York - 2019/2020 (red), 2020/2021 (blue)

Source: Office for Health Improvement and Disparities (OHID)

Emergency hospital admissions for injuries resulting from a fall (over 65), per 1,000 population

Falls data: the figures given here are taken from Hospital Episode Statistics data, which takes the number of those aged 65 or over being admitted to hospital on a non-elective basis at least once in each year as a result of a fall and divides it by the number of those of that age group resident in each ward to give a rate per 1,000 population.

York Profile

Mortality

Mortality, All ages

(standardised mortality ratio, 5 year aggregated data)

The standardized mortality ratio or SMR, is a quantity, expressed as either a ratio or percentage quantifying the increase or decrease in mortality of a study cohort with respect to the general population.

New cases of cancer

(standardised incidence ratio, 5 year aggregated data)

The standardized incidence ratio (SIR) is an estimate of the occurrence of cancer in a population relative to what might be expected if the population had the same cancer experience as some larger comparison population designated as "normal" or average.

York Profile

Broadband coverage and speeds

In March 2017 the UK Government introduced the Universal Service Obligation (USO) for broadband as part of its commitment in the UK Digital Strategy to ensure that the UK has world-class digital connectivity and inclusion.

Measure	York	National	Summary
Average download speed (Mb/s)	177.50	106.09	faster than the National average
Superfast broadband availability	96.17%	96.58%	worse than the National average
Connections receiving:			
slowest speeds (under 2 Mb/s)	0.04%	0.20%	lower than the National average
slower speeds (under 10 Mb/s)	0.67%	0.91%	lower than the National average
superfast speeds (over 30 Mb/s)	96.32%	96.93%	lower than the National average

This data is based on analysis of Ofcom's Connected Nations data for 2022/2023. Ofcom collected and analysed data from major fixed telecoms operators (BT, Virgin Media, Sky, Talk Talk, Vodafone and KCOM). Due to variations in broadband performance over time, Ofcom cautions that the data should not be regarded as a definitive and fixed view of the broadband infrastructure but rather a snapshot of current variation in availability and performance across the country.

Cost of Living Indicators
